

Inventory Management System

•The software "Inventory Management System" incorporates and automate the tasks involved to manage inventory viz Stock availability, product consumption, inventory distribution etc. The system provides easy, compact and comprehensive solution, which helps to monitor entire Inventory control and indent process and generate effective information to enrich the management for cost effectiveness and enhancement of overall productivity.

OBJECTIVE

- A Complete solution provider, an automated Inventory Management System, to assist the management and organisation to mobilise available resources, improve efficiency, monitor inventory of non running items, maintain buffer stock in case of emergency and reduce unwarranted overheads.
- A system, which will impart continuous and comprehensive inventory details to the management and ease decision-making process.
